

PGP® Portable

Portable, self-contained encryption on any removable storage device or media

Benefits

- **Protect any device or any media**—PGP® Portable from Symantec™ provides software-based encryption for any USB device or CD/DVD.
- **Access encrypted data without installing software**—Share, distribute, and collaborate. Create a PGP Portable-enabled device on Microsoft® Windows® using PGP® Desktop from Symantec™ client software. Access encrypted data on both Microsoft Windows and Apple Mac OS X without installing any specialized software on the client. PGP Portable provides in-place viewing and editing without modifying the native user experience.
- **Enforce enterprise security policy**—Automatically enforces corporate security policy for removable devices; supports automation and provisioning. Self-help passphrase changes and corporate access to data enable security and compliance without disrupting user productivity.

PGP® Portable: Share, distribute, collaborate

Protect any device, any media

With USB memory devices now able to store gigabytes of data and available in hundreds of different form factors, it's no surprise that they have become a key way to exchange

data with colleagues, partners, and even customers. The challenge is that their convenience also presents a security risk if one of these devices is lost or stolen. Some of the largest data breaches experienced by public and private enterprises have occurred because these small, convenient devices are dropped in a public setting or stolen from cars or briefcases—and in some cases, out of the offices of those using them.

Usage scenarios

- **Share**—Protect confidential data without investing in expensive, specialized hardware USB drives that require additional management

PGP customer spotlight

"We strive to protect customer data. We always have. Our worth and value is in the assessments we create, and we wouldn't want those disclosed. PGP software enables us to protect those assets."

—Marcus Prendergast, Senior Security Engineer, Educational Testing Service

- consoles. With PGP Portable, instantly encrypt any USB drive, set a passphrase, drag and drop files you need, and share the USB drive.
- **Distribute**—Don't risk confidential product information on unsecured CDs falling into a competitor's hands. With PGP Portable, encrypt a folder, set a passphrase, drag and drop files into a folder, burn the folder onto any optical media, and distribute it without worry.
- **Collaborate**—No more worries about an employee losing a USB drive containing confidential project files while working away from the office. Centrally manage and automatically enforce removable device policy with PGP Portable.

Secure and easy to use

- **Any device, any media**—Easily secure any removable storage device or any optical media, including USB devices, CDs, DVDs, and Blu-Ray discs, up to 128 GB.
- **Patent-pending extension to proven technology**—PGP Portable extends the highly trusted, proven, and vetted FIPS 140-2–validated AES 256-bit PGP Virtual Disk technology.
- **No need to run specialized file browsers or applications**—Users access data on PGP Portable–enabled USB drives and media as they would their regular data, using their native Microsoft Windows or Apple Mac OS X file system browser.
- **No specialized disc burning software to install**—Users can continue to use their disc burning software of choice when securing optical media with PGP Portable.

Share, distribute, collaborate

- **Access and modify data without installing additional software**—Users with a valid passphrase can access data on PGP Portable–enabled devices without installing additional or specialized software.
- **Create, drag, and drop**—Enjoy a native file browsing experience when using a PGP Portable–enabled USB device. No need to manually encrypt or decrypt individual files; the user experience is seamless.
- **Secure in-place editing**—PGP Portable provides in-place data editing while keeping data secure on the device. PGP Portable eliminates potential points of security failure; there is no need to decrypt, copy the data locally from the device, edit, and then copy back onto the device.
- **Cross-platform**—Create a PGP Portable–enabled device on Microsoft Windows using PGP Desktop client software. Access secure data on Microsoft Windows and

Mac OS X (does not require software installation) based computers.

Built for the enterprise

- **Automatic policy enforcement**—Removable device encryption policy is centrally managed and automatically enforced by PGP Universal™ Server from Symantec™.
- **Automation and provisioning**—PGP Portable’s command line interface enables scripting and automation for quick configurations.
- **Support for disaster recovery and forensics**—Patented, secure, split recovery key ensures organizations have access to data in case of a disclosure, audit, disaster, or similar event.
- **Self-help passphrase changes**—Users with a valid passphrase can change the passphrase for a PGP Portable–enabled device without installing additional software. Corporate access to data is maintained in the event of passphrase changes.
- **Extends an enterprise data protection strategy**—PGP Portable works together with full disk encryption, network file sharing, and email protection solutions from Symantec.
