

PGP Universal™ Gateway Email

Secure email communications without client software

Benefits

- **Easy, automatic operation**—Protects sensitive email without changing the user experience.
 - **Enforced security policies**—Automatically enforce data protection with centrally managed policies.
 - **Accelerated deployment**—Achieves end-to-end email encryption integrating with the existing infrastructure.
 - **Reduced operation costs**—Result from eliminating training and help desk costs through clientless operation.
-

Protect email confidentiality with centrally defined and enforced encryption policy

PGP Universal™ Gateway Email, now from Symantec provides centrally managed, standards-based email encryption to secure email communications with customers and partners. By encrypting data at the gateway, PGP Universal Gateway Email ensures data is protected from unauthorized access in transit and at rest on a recipient's mail server. With PGP Universal Gateway Email, organizations can reduce the risk of a data breach and comply with partner and regulatory mandates for information security and privacy.

Gateway-Based Email Encryption

PGP Universal Gateway Email secures email messages automatically as they leave the enterprise network according to encryption rules, eliminating the need for client software or user intervention. Flexible delivery options support secure messaging to recipients both with and without an existing email encryption product. Recipients do not need to install any software to read encrypted messages.

PGP® Encryption Platform–Enabled

PGP Universal Gateway Email is a PGP Encryption Platform–enabled application. The PGP Encryption Platform provides a strategic enterprise encryption framework for user management, policy, and provisioning, across multiple encryption applications. PGP Universal Gateway Email can also be used in conjunction with other PGP® applications to protect data wherever it goes.

Easy, Automatic Operation

Once PGP Universal Gateway Email is deployed, its operation is completely transparent—users simply continue to work as usual. The software automatically provides secure delivery according to policy, without changing internal end-user behavior, workflow, or productivity. Users are automatically enrolled using the existing infrastructure.

- **Flexible, secure delivery options**—Provides encrypted PDF or Web-email interface (Web Messenger) for securely delivering messages to external users without an email encryption solution.
 - **Certified Delivery**—Allows organizations to track and verify delivery.
 - **Standards support**—Interoperates with open standards, such as OpenPGP® and S/MIME.
-

Enforced Security Policies

Security policy automatically triggers encryption based on content, sender, recipient, and other message details that identify confidential information.

Accelerated Deployment and Customization

- **Automated user enrollment**—Makes account creation and key management automatic and transparent to end users.
- **Clientless operation**—Eliminates impact on senders and does not require partners to invest in new software, hardware, or training.
- **Branding support**—Allows organizations to customize the Web-based delivery mechanism to reflect their brand.

Reduced Operation Costs

- **Adapt to evolving security requirements**—Allows administrators to quickly implement new policies to control mail flow and encryption.
- **Leverage existing compliance investments**—Works together with Symantec data loss prevention, anti-spam and anti-malware solutions.

Administration and Security Policy
