

# PGP Universal™ Server

Manage multiple encryption applications from a single console

---

## Benefits

- **Streamline user management**—Enroll users and assign security policy automatically.
  - **Enforced security policies**—Centrally manage policies to protect data and perform administrative tasks.
  - **Accelerated deployment**—Use the same infrastructure for managing and deploying multiple encryption applications.
  - **Reduce costs and complexity**—Oversee operations from a single unified console.
- 

## Central administration for enterprise data protection

A comprehensive data protection strategy starts with a plan to defend data on multiple fronts. Some companies start with disk encryption to address near term compliance concerns, and add protection for email and files over time.

Prescient IT organizations understand that deploying multiple point solutions can lead to an operational headache. Over time, the complexity and administrative work load creates an escalating burden.

PGP Universal™ Server, now from Symantec provides organizations with a single console to manage multiple encryption applications from the PGP® Encryption Platform. IT organizations can manage users, automate administrative activities and establish policies to defend sensitive data and avoid the financial loss, legal ramifications, and brand damage from a data breach.

### *PGP Universal Server delivers:*

- **Central administration**—Manage multiple PGP® encryption applications using a single console.
- **Policy enforcement**—Delivers centralized policy configuration to automate administration and to

ensure that data protection is operating within expected parameters.

- **Reporting & logging**—Provides visibility into the current state of data protection to provide oversight.
- **Key management**—Creates, distributes, and stores encryption keys while maintaining the organization's ability to recover data.

### *Build for Tomorrow's Needs*

Using PGP Universal Server, an organization can deploy one encryption application to satisfy immediate requirements and then deploy additional applications later, as required. This strategic approach to encryption allows the enterprise to quickly adapt to emerging requirements for encryption using a single management console.

---

## Simplify Administration

- **Automatic user enrollment**—Creates accounts, manages encryption keys, and assigns policy without requiring manual administrative effort.
  - **Directory integration**—Integrates with an enterprise directory to reduce user management.
- 

## Enforced Security Policies

- **Advanced policy engine**—Centrally define policy to set product configurations, enforce corporate standards, and automate administrative actions.
- **Client controls**—Lock down which client features are enabled, visible to the user, and enforced.
- **Establish policy for PGP® Encryption Applications**—For example, PGP Universal Server controls policy for PGP® NetShare to transparently protect documents on the desktop and shared folders.

## Data Sheet: Encryption PGP Universal™ Server

### Accelerated Deployment

- **Rapid deployment process**—Speeds deployment by automating the installation and configuration process.
- **Reduce software installation effort**—PGP Universal Server automates and activates installation of PGP Encryption Applications.

---

### Reduced Operation Costs

- **Unified administration console**—Eliminate the cost of maintaining multiple consoles and minimize the risk of inconsistent security policy.
- **Enterprise integration**—PGP Universal Server works together with enterprise directories, PKI, systems management tools, email hygiene and data leakage prevention (DLP) solutions.
- **Status logging & reporting**—Track the state of protection to satisfy regulatory requirements and avoid a data breach.
- **Extensible protection**—Mix and match PGP Encryption Applications to satisfy data protection requirements. PGP Encryption Applications include PGP® Whole Disk Encryption, PGP® Desktop Email, and PGP® NetShare.
